

Our Blueprint for Strategic Action (BSA)

Our dynamic framework for transforming Jefferson – and health care – was created with input from more than 1,800 people inside the institution and from the broader community.

Foundational Enablers: **Partnerships. Diversity. Technology. Philanthropy.**

These four enablers support the six vectors of the Blueprint for Strategic Action, allowing the “new” Jefferson to achieve our mission and vision – facilitating and fueling our capacity to achieve our strategic initiatives.

Patients and Families First

We will improve the health of our patients, families and community through comprehensive, personalized, cost-effective, quality care.

BSA in action

Jefferson’s Patient and Family Advisory Council partnering former patients and/or family members with members of the Jefferson team to provide guidance on improving the patient and family experience. Through the PFAC members’ unique experiences, they give input on issues that impact care, ensuring that the next patient or family member’s journey at Jefferson is easier.

One Jefferson

We will align clinical, educational, and research missions to accelerate innovation and foster a culture of diversity and inclusion.

BSA in action

JOLT (Jefferson Onboarding and Leadership Transformation) is a Center for Learning that will propel Jefferson to become a learning organization that is nationally recognized for developing and nurturing great leaders and teams, its capacity for innovation, and continuous improvement of quality, safety and the patient experience.

Seamless Clinical Enterprise

We will define the future of medical care.

BSA in action

Virtual rounds bring the patient’s loved ones to the bedside to better improve care coordination between providers, patients and their family.

High-Impact Science

We will develop a research infrastructure and culture that incubates ideas and creates value.

BSA in action

Jefferson invests in programmatic research by supporting its first set of **Theme Teams**, each bringing together a diverse set of expertise to focus on a critical area of medical research.

Programs of Global Distinction

We will integrate our tripartite mission (education, patient care and research) to distinguish ourselves in selected areas of focus.

BSA in action

Farber Institute for Neurosciences researchers are generating patient-specific stem cells to develop personalized pharmaceutical, genetic and cell based therapies for Parkinson’s Disease patients.

Forward-Thinking Education

We will reinvent health sciences education to meet the needs of future delivery models.

BSA in action

The Health Sciences Pipeline Program has partnered with Philadelphia Academies, Inc. and Roxborough High School to support their biotechnology career academy. A member of Jefferson’s faculty will guide the creation of the curriculum.

Our Mission: Health is All We Do

Our Vision: We will reimagine health, health education, and discovery to create unparalleled value
